

**PROTECTION PACK**

**OPTIPARTS**  
MARINE EQUIPMENT

Foto by: Matias Capizzano

**COMPLETE PACKAGE OF OPTIMIST PROTECTION FOR:**

- MASTSTEP
- OUTHAUL
- DAGGERBOARD
- BAILER
- MAST
- SPRIT

**PART NUMBER:  
EX1118**

# How to use our protection pack:

- After opening identify all products
- make sure the surface is clean and dry
- remove the liner
- once in position, pressure the tape from the center and move to the edges to eliminate trapped air
- if necessary cut the tape with a knife or scissor

1. Maststep. The stripe is longer than the circumference of the mast, so apply around the mast and cut the excess part
2. Maststep discs. 5 discs allowing your mast to move up to maximum 7.5 mm. Take care of the class rules which allows a minimum distance from maststep to deck of 240 mm.
3. Outhaul. Apply this stripe under the boom to reduce friction of the corner tie
- 4/ Daggerboard. turn the boat upside down and insert the daggerboard. Then measure the gap between daggerboard and case. Select the required tape to minimise play. You can apply 0.5 mm on top of 0.25 mm if necessary. cut the tape to the correct length. Apply long pieces at the bottom and short (30 mm) pieces at the top of the case.
6. Rigging tape. This tape can be applied anywhere were needed and has 300% elongation. Apply with at least 25% overlap.
7. Sprit. Apply on the side facing the mast.
8. Sprit/mast. Apply on the side facing the sprit
9. Mast. Apply on the mast to reduce friction between the hal yard block and the mast.
10. Boat corners / rudder. Apply on the four corners and the rear side of the rudder.
11. Top daggerboard case. Apply on the top of the case to prevent wear and friction between the case and the daggerboard battens.
12. 6 rubber Daggerboard inserts to be applied with common rubber contact glue (not provided)

**PART NUMBER:  
EX1118**

## ***Optimist protection pack***

This kit contains 29 pieces of ultra high molecular weight polyethylene tapes with an aggressive acrylic adhesive. The result is a very tough material, with the highest impact strength of any thermoplastic presently made. Covering mast, sprit, boom, daggerboard case and rigging.
